

Prepared by: Omer Waqar (Ph.D., P.Eng., SMIEEE)

******* INSTRUCTIONS *******

- For **Question 1**, create and populate the `ArrayList` exactly as specified and ensure that the output format matches the example provided.
- For **Question 2**, implement the `contains(o)` method in the `ArrayList` class discussed in lecture. Do not use the built-in Java `contains()` method.
- For **Question 2**, when testing your method, use the `Scanner` class to take user input and use the `equals()` method to compare elements.
- All submitted work must be your own (or your group's) original work. Academic integrity policies apply.

Question 1: Print contents of the `ArrayList`

Implement a `main` method in which an instance of `ArrayList` class is created. Add five integers in the newly created list and print the contents of this list using the `toString()` method of the `ArrayList` class.

Output:

Contents of the `ArrayList`:
(10, 20, 30, 40, 50)

Question 2: Implement a new method for `ArrayList` class

The `java.util.Collection` interface includes a method, `contains(o)`, that returns `true` if the collection contains any object that equals `Object o`. Implement such a method in the `ArrayList` class that we studied during the lecture. The Java source code for the `ArrayList` class has already been uploaded on Brightspace.

Assume that your list contains the following content: (2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18)

Now test your `contains(o)` method in your `main` method by taking input from the user using the `Scanner` class. **Hint:** Remember to use the `equals` method to test equality.

The output may look like this (depends on user input):

Output:

Contents of the List:

(2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18)

Enter an integer that you want to find in the list: 55

No, the element of value 55 is NOT included in the list.

OR the output may look like this (again depends on user input)

Output:

Contents of the ArrayList:

(2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18)

Enter an integer that you want to find in the list:15

Yes, the element of value 15 is included in the list.
