

Task 1:

```
public class task1{
    public static void main(String[] args) {
        ArrayList<Integer> list = new ArrayList<>();

        for(int x = 50; x >= 10; x-=10){
            list.add(0, x);
        }

        System.out.println("Contents of the ArrayList:\n" + list);
    }
}
```

Output:

Contents of the ArrayList:
(10, 20, 30, 40, 50)

Task 2:

```
import java.util.Scanner;

public class task2{
    public static void main(String[] args) {
        ArrayList<Integer> list = new ArrayList<>();
        Scanner scan = new Scanner(System.in);

        for(int x = 18; x >= 2; x--){
            list.add(0, x);
        }

        System.out.println("Contents of the List:\n" + list);
        System.out.println("Enter an integer that you want to find in the list: ");

        try{
            int toFind = scan.nextInt();

            if(list.contains(toFind)){
                System.out.println("Yes, the element of value " + toFind +
" is included in the list.");
            }else{
```

```

        System.out.println("No, the element of value " + toFind +
" is NOT included in the list.");
    }
    }catch (java.util.InputMismatchException e){
        System.out.println("Please enter a valid integer.");
    }

}
}

```

```

/**
 * Checks to see if the array contains the given element.
 * @param e the element to be checking
 */
public boolean contains(E e){
    for (int k=0; k < size; k++){
        if (data[k].equals(e)){
            return true;
        }
    }
    return false;
}

```

Output:

Contents of the List:

(2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18)

Enter an integer that you want to find in the list:

12

Yes, the element of value 12 is included in the list.

Contents of the List:

(2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18)

Enter an integer that you want to find in the list:

100

No, the element of value 100 is NOT included in the list.
